 NO = The feature is not supported
 X = Still awaiting confirmation
 N/A = No information could be found

1. SurfControl utilize Virtual Learning Agent technology which uses neural networks to identify and classify spam content. It performs analysis using neural networks to analyze e-mail

content coming in and going out of an organization. It analyzes content both in the body of the e-mail and in attachments. This is not the same as Bayesian filtering however, please check bayesian article for more details.

2. Automatically adds email recipients to whitelist.
3. Automatically imports Exchange contacts to whitelist.
4. Supports identifying for example German, French or Italian spam, using either foreign keywords (ready configured) or automatically learning.
